

HARRY GOMEZ-DONATO

[linkedin.com/in/hgomezdo](https://www.linkedin.com/in/hgomezdo) | Corvallis, OR

EDUCATION

Oregon State University, BS Electrical and Computer Engineering *Corvallis, OR* | **Expected Graduation: Jun 2027**

GPA: 3.64/4.00 | Society of Hispanic Professional Engineers (SHPE)

Purdue University, BS Computer Engineering (Transferred)

West Lafayette, IN | **Jul 2022 – May 2024**

National Society of Black Engineers (NSBE) | Global Engineering Alliance for Research and Education (GEARE)

WORK/PROJECT EXPERIENCE

Protection and Controls Engineering Intern

Portland, OR | **Jun 2025 – Aug 2025**

Avangrid

- Consolidated 5 substation regions into 4, improving breaker-event traceability and giving operators clearer visibility into recurring issues across the grid.
- Updated one-line, wiring, and elementary diagrams across multiple substations and produced precise AutoCAD redlines to correct field and documentation discrepancies.
- Integrated low-low SF₆ gas gauges into GIS protection logic, improving equipment reliability and supporting safer and faster fault-interruption decisions.
- Migrated relay settings into MathCAD and configured devices in SEL AcSElerator to verify correct system protection behavior across multiple substations.

Systems and Controls Support Intern

Hillsboro, OR | **May 2024 – Aug 2024**

Genentech

- Built more than 20 ServiceNow-integrated forms that reduced request errors, improved communication clarity for systems and control engineers, and created a more reliable support workflow.
- Developed front-end features that streamlined internal workflows across engineering, automation, and quality-assurance teams, making routine coordination smoother and more consistent.
- Converted technical requirements into intuitive user-facing forms that supported faster recipe changes, more consistent configuration updates, and clearer communication between teams.

Accelerometer-Based Monitoring Device — Junior Design Project

Corvallis, OR | **Sep 2025 – Present**

Oregon State University

- Defined ER1–ER3 (battery operation, 1–3 g $\pm$ 10% accuracy, $\geq$ 1 Hz update rate) and established full requirement traceability across the entire system.
- Designed schematic and PCB layout in KiCad, including regulated power, sensor routing, and MCU interfaces.
- Implemented I²C communication with the MPU-6050, developed the real-time processing pipeline, and created validation criteria for accuracy, update rate, and end-to-end system performance.

Undergraduate Researcher for GEARE

West Lafayette, IN | **Oct 2023 – May 2024**

Purdue University

- Analyzed TLBB & CQS datasets (~80 students) using R and created detailed visual dashboards to study deeper patterns in team-learning behaviors and group performance.
- Cleaned and anonymized datasets to ensure research integrity and reproducibility.
- Identified cultural and behavioral trends to support findings for ongoing research in cross-cultural engineering education and student learning outcomes.

TECHNICAL ABILITIES & SKILLS

Systems/Power: Protective relays (SEL-751), AC/DC systems, substation diagrams, GIS/SF₆ equipment, protection schemes

Tools: AutoCAD, KiCad, LTspice, MathCAD, SEL AcSElerator, MATLAB, ServiceNow

Programming: Python, C/C++, Java | **Hardware/Lab:** oscilloscopes, multimeters, PCB design/debug

Languages: English (native), Spanish (native) | **Awards:** HSF Scholar
